

SIDECAR CHASSIS PARTS

Should anyone need sidecar couplings and basic chassis parts, I have the parts in the picture gathering dust in my garage. I had intended building a sidecar for my Square 4, but I have acquired a new enclosed trailer and sold my open trailer and now can't transport a bike with a sidecar. The parts comprise:

Mudguard with mounting bracket (needs work before painting)

Wheel (painted red centre), with new tyre and tube, bearings, centre cap and stub axle

Main chassis bar (not shown), and mounting pins

Springs, with connecting bar and rubbers,

Cast couplings (require machining)

Clearance lamp

Price is negotiable (I paid around \$500 for these parts when first bought with them with a sidecar boat that cost me \$1000, but boat has already gone).
